

Automatic Self-Cleaning Strainers

The Eliminator® & Hyper-Jet® patented automatic self-cleaning strainers provide continuous debris removal from fluid piping systems that demand full time uninterrupted flow.

Simplex Strainers

Simplex (basket) strainers are an inexpensive design that are used in applications where the flow can be interrupted for basket cleaning.

Duplex Strainers

Duplex strainers are used in applications where fluid flow cannot be interrupted when the basket is removed for cleaning.

Conical Strainers

Temporary (Conical) Strainers are very low cost pipeline strainers that are designed for new system start-ups.

"Y" Strainers

Y Strainers are to be used in applications where small amounts of solid particles are expected and where clean-out will be infrequent.

Custom Skid Packages

Strainer skid packages are designed to handle a consistent flow of debris laden influent. They can be comprised of any combination of patented automatic strainers or even simplex strainers.

Gas Coalescing Filtration

Our patented coalescing gas filters utilize "New Flow Technology" (or Outside-to-In) flow which offers superior filtration.

Other Products Available
